OMSCHRIJVING

Mathematics for Business Economics has been developed for students in mathematics in higher professional and university economics studies. It not only presents the fundamentals of mathematics, but also shows how mathematics is applied, especially in business economics. It is based on many years of experience in mathematics lectures in economics and business administration at Tilburg University, and on teaching high school students. As a result, this book perfectly fits the level of first-year students in economics and business administration. This is attained by paying more attention to elementary calculation techniques - e.g. solving of (in)equalities, arithmetics with powers -, the change in the order of the mathematical topics and the inclusion of more examples and exercises. Economic applications have been selected not only from the field of microeconomics, e.g. consumer and producer behavior, but also include modern portfolio theory, inventory management and statistics. This book is based on an earlier edition, *Mathematics with Applications in Micro-Economics*, and is also available in a Dutch language edition. Online support Additional material is available on www.academicsservice.nl, including: + An e-learning environment, where mathematical notions and methods are explained with films, text and multiple choice questions. + Complete solutions to all exercises in this book. About the authors Prof.dr. Herbert Hamers is professor in Game Theory and Operations Research at Tilburg University. Dr. Bob Kaper was professor in Mathematics at Tilburg University. Dr. John Kleppe teaches Mathematics at Tilburg
